

Dasher boards and Hardware for dasher boards

As the choice of community rinks and major sports facilities around the world, the dasher board system offers both durability and efficiency. This system features a hot-dip galvanized steel frame, with acrylic shielding.

The design of the board panels allows easy dismantling; acrylic shielding is lighter than tempered safety glass, allowing the arena crew to perform quick, efficient changeovers.

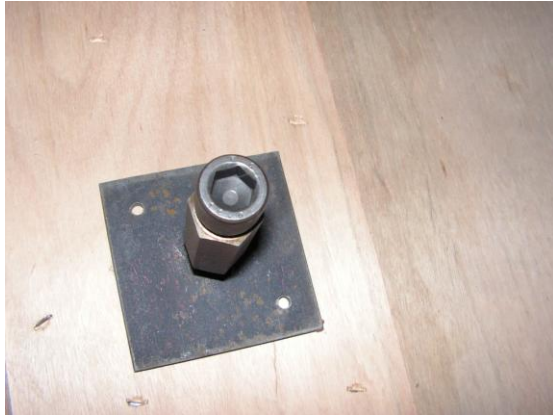

The dasher boards are assembled by the hot-dip galvanized steel frame and the plastic sheet, and then assembled together. The standard steel frame is custom designed to each project's requirements.

The steel frame parts: includes the straight and radius steel frames for both outside and inside

The hardware for the dasher boards:
